**Instructor:** Dr. Kelly J. Sexton
**Office:** C234
**Office Phone:** 972-273-3512 (I would prefer that you email me)
**Email address:** ksexton@dcccd.edu

**Course description:** This course will examine histology, integument, skeletal, muscular, and nervous systems with special attention paid to homeostasis. Emphasis is on structure, function and the interrelationships of the human systems. **Prereq: Biol 1406 or SCIT 1407 or equivalent.**

**Course Objectives:**
1) Understand and describe the different topics in anatomy and physiology.
2) Understand homeostasis and interdependence among the organ systems.
3) Identify and understand structure and function of the various body tissues.
4) Identify structures and understand functions of organs of integument, bone, muscle and nervous systems.
5) Understand relationships among these and other organ systems.

**Required Materials:** available in the bookstore and elsewhere.

1) Current college level [Human Anatomy and Physiology](#) text. (Suggested authors—Marieb, Seeley, Tortora, Martini) or the free online text at www.openstaxcollege.org.
2) [Human Anatomy and Physiology Laboratory Manual](#), any edition by Marieb and Mitchell
3) Scantrons (8) for lecture and lab exams (Form 882-E……green form)
4) Mini-Scantrons (approx 10) for Bonus Quizzes

**Optional Materials:**

1) [Atlas for Anatomical Models](#) by Brothers (available from Amazon.com or Createspace.com) – If you buy it from createspace you can use the following discount code:
   https://www.createspace.com/3434530
   Please use the following discount code for $9.00 off the retail price.
   
   $$\text{discount code} = \text{B89NV6YY}$$

2) [HOME LAB](#) by ISAC/RUTHENY (available from Amazon.com)
3) Electronic flashcards
4) Atlases
5) Coloring books/workbooks

**E-CAMPUS:**

E-campus will be used extensively in this class. The web address is ecampus.dcccd.edu (NOTE: There is NO www in front of the web address). During the first day of classes each student MUST sign onto e-campus and fill out the student profile including a valid email address. E-campus will be used to communicate with students and to post grades.

**Grading Policy:**

1) **Lecture:**
   
   There will be Four LECTURE EXAMS. Lecture exams will be given in the Testing Center (4th floor of the A building A425, phone 972-273-3160). Each student will have approximately 3 days to take the exam. Testing Center hours are 8:30 am to 8:30 pm MTWT and 8:30 am to 3:30 pm on FS. The Testing center will NOT give out exams later than 7pm on MTWR or 2pm on FS. The Testing Center is closed on Sunday. No make-up lecture tests will be given.

**Lecture Exams**

Lecture exams will be offered in two formats: Test and Retest.

**TEST**
1) 80 objective questions consisting of multiple choice, matching, labeling diagrams, and fill in the blank. These are worth 1 point each. And two short-answer/essay questions worth 10 points each. **Please check your exam before taking it to insure you have a complete exam.**

The short-answer/essay questions can be found at the end of the syllabus and can be prepared ahead of time. Each student will receive a different pair of questions so ALL questions should be prepared for maximum effectiveness. These questions will also aid in studying for the rest of the exam.

**RETEST**
2) 100 multiple choice, matching, labeling, diagrams, etc. questions worth 1 point each.

All lecture exams are comprehensive. Approximately 10% of the material will be from previous materials. Lecture exams will comprise 60% of the Final Grade.

You may take both the test and/or retest (within the stated time period). If you wish to do both you MUST take the TEST first. If you wish to take only one you may choose the test or retest and take that. If you take both (and in correct order) the higher grade will be recorded.
2) Laboratory:

Lab will comprise 40% of the total grade and will be determined from practical and objective exams. There will be FOUR LAB EXAMS. These will be given in lab and will consist of a combination of 50 practical and objective questions. The lowest grade (or a single missed exam grade) is dropped.

3) Bonus QUIZZES:

On a regular but random basis there will unannounced bonus quizzes. These will typically be “team” quizzes and will be given in LECTURE. Only those students present may receive bonus credit. NO BONUS QUIZZES CAN BE MADE UP. THIS IS THE STUDENT’S ONLY CHANCE FOR EXTRA CREDIT. A mini-scantron will be required to take each bonus quiz.

Determination of Final Grade

The lecture portion of the class will represent 60% of the final grade
The lab portion of the class will represent 40% of the final grade.

The lab average (x .4) and the lecture average (x .6) will be added to produce the final grade as follows:

\[
\text{Final Average} = ((\text{Lect1} + \text{Lect2} + \text{Lect3} + \text{Lect4} + \text{Bonus}) \times .6) + ((\text{Lab1} + \text{Lab2} + \text{Lab3} + \text{Lab4}) \text{ minus the lowest lab test grade}) \times .4)
\]

INSTITUTIONAL POLICIES

ACADEMIC DISHONESTY
The Student Code of Conduct prohibits academic dishonesty and prescribes penalties for violations. According to this code, which is printed in the college catalog, "academic dishonesty", includes (but is not limited to) cheating, fabrication, facilitating academic dishonesty, plagiarism, and collusion.

1) The Vice-President of Academic & Student Affairs may initiate disciplinary proceedings against a student accused of academic dishonesty.

2) Academic dishonesty includes, but is not limited to, cheating on a test, plagiarism and collusion.

3) Cheating on a test includes:
   a) Copying from another student’s test paper;
   b) Using, during a test, materials not authorized by the person giving the test;
   c) Collaborating with another student during a test without permission to do so;
   d) Knowingly using, buying, selling, stealing, transporting, or soliciting in whole or part the contents of an un-administered test.
   e) Substituting for another student, or permitting another student to substitute for you to take a test; and
   f) Bribing another person to obtain an un-administered test or information about an un-administered test.

4) “Plagiarism” means the appropriation of another’s work (ideas and/or words) and the unacknowledged incorporation of that work in one’s written work offered for credit. Quotes not identified as quotes constitute a form of plagiarism even if the borrowed ideas are documented.

5) “Collusion” means an unauthorized collaboration with another person in preparing written work offered for credit.

Academic dishonesty may result in the following sanctions, including, but not limited to:
1. A grade of zero or a lowered grade on the assignment or course.
2. A reprimand.
3. Suspension from the college.

NOTIFICATION OF ABSENCE DUE TO RELIGIOUS HOLY DAY(S)

Students who will be absent from class for the observance of a religious holiday must notify the instructor in advance. Please refer to the Student Obligations section of the college catalog for more explanation. You are required to complete any assignments or take any examinations missed as a result of the absence within the time frame specified by your instructor.
REQUIREMENTS OF THE AMERICANS WITH DISABILITIES ACT (A430)

North Lake College provides academic accommodations to students with disabilities, as defined under ADA law. It is the student's choice and responsibility to initiate any request for accommodations. If you are a student with a disability who requires such ADA accommodations, please contact North Lake College's Disability Services Office in person (A430) or by phone at 972-273-3165.
http://www.northlakecollege.edu/resources/disability

ADMINISTRATIVE WITHDRAWAL

Students with valid extenuating circumstances may be eligible for an administrative withdrawal by the Dean of the Division in which the course or courses are taught. An administrative withdrawal will not be awarded to students who simply fail to withdraw prior to the last day to receive a "W." The request for an administrative withdrawal must be made in writing to the Dean of the Division with any supporting documentation attached. This must occur before the last official day of the semester.

DROP POLICY

If you are unable to complete this course, you must officially withdraw by 6/26/13. Withdrawing is a formal procedure which you must initiate; your instructor cannot do it for you. All Dallas County Community Colleges charge a higher tuition rate to students registering the third time for a course. This rule applies to the majority of credit and Continuing Education / Workforce Training courses. Developmental Studies and some other courses are not charged a higher tuition rate. Third attempts include courses taken at any DCCCD college since the fall 2002 semester. For further information, go online to: http://www.DCCCD.edu/thirdcourseattempt.

STOP BEFORE YOU DROP

For students who enrolled in college level courses for the first time in the fall of 2007, Texas Education Code 51.907 limits the number of courses a student may drop. You may drop no more than 6 courses during your entire undergraduate career unless the drop qualifies as an exception. Your campus counseling/advising center will give you more information on the allowable exceptions. Remember that once you have accumulated 6 non-exempt drops, you cannot drop any other courses with a "W". Therefore, please exercise caution when dropping courses in any Texas public institution of higher learning, including all seven of the Dallas County Community Colleges. For more information, you may access: https://www1.dcccd.edu/coursedrops.

FINANCIAL AID STATEMENT

Students who are receiving any form of financial aid should check with the Financial Aid Office prior to withdrawing from classes. Withdrawals may affect your eligibility to receive further aid and could cause you to be in a position of repayment for the current semester. Students who fail to attend or participate are also subject to this policy. To apply for financial aid in the DCCCD, students must complete FAFSA (Free Application for Federal Student Aid) on the web at: http://www.fafsa.ed.gov
COUNSELING SERVICES (A430)

Counseling services for personal issues are provided to all students currently enrolled at North Lake College. These services are provided by licensed professionals who are bound by confidentiality (within ethical parameters) at no charge. With the assistance of a counselor, students are able to identify, understand, resolve issues and develop appropriate skills. To make an appointment call 972-273-333 or visit A 430.

THE ACADEMIC SKILLS CENTER (A332)

The Academic Skills Center (ASC) is designed to provide assistance to students in the following areas:

- Labs for students enrolled in foreign language, Developmental Reading, and ESOL courses. One-on-one tutoring is available.
- The Writing Center can help students clarify writing tasks, understand instructors’ requirements, develop and organize papers, explore revision options, detect grammar and punctuation errors, and properly use and document sources. Rather than merely editing or “fixing” papers, tutors focus on helping students develop and improve their writing skills.
- The Online Writing Lab (OWL) allows students to submit papers to our writing tutors electronically and get feedback within 24-72 hours. The OWL can be accessed through eCampus. After logging on to eCampus, click on the Community Tab at the top. Type “Owl” in the search field and click “Go.” Next, click on the double drop-down arrows next to “NLC-OWL2,” and then click on “Enroll.” Once enrolled, students can receive services from the OWL.

For more information or to schedule a tutoring appointment, come by A-332 or call 972-273-3089.

TESTING CENTER (A 425)

Monday-Thursday: 8:30 a.m. – 8:00 p.m.
   No tests will be issued after 7:00 p.m. Other cut-off times may be in effect for specific exams by the instructor’s direction. All exams collected at 8:00 p.m.
Friday-Saturday: 8:30 a.m.-3:30 p.m.
   No tests will be issued after 2:30 p.m. Other cut-off times may be in effect for specific exams by the instructor’s direction. All exams collected at 3:30 p.m.
Sunday – CLOSED

If your instructor requires you to complete an exam in the Testing Center, be sure to have the following information when you request your test:
1. Instructor’s name
2. Subject, course number, and section number (ex: Speech 1311.7011)
3. Exam number (1st, 2nd, 3rd, etc.)
4. Exam deadline (Get this information from your instructor. The testing staff cannot look up this information on computers).

You should also bring the following supplies:
1. Pencil
2. A Test Request Form must be completed before entering the Testing Center.
4. Government or school issued photo identification is required & enforced.
You may not bring personal items into the Testing Center. This includes bags, cell phones, and pagers.

Please show courteous and cooperative behavior while using the services provided by the Testing Center.

DO NOT bring children to the Testing Center. You must make arrangements for the care of your children prior to your exam date. The police department will be notified of any unattended children.

DO NOT take any testing materials with you when you leave the Testing Center. This includes the test, answers, charts, scratch paper. These items will be attached to your test. To do so constitutes Academic Dishonesty.

Questions? Please visit the Testing Center (A 425) or call 972-273-3160.

**Division Policy on Bathroom Breaks during Testing.**

Students taking tests in math and science will NOT be allowed to leave the testing center or the classroom during a test and return to complete the test. If you leave you are through testing. If you need special accommodations, talk to your instructor or the Disability Services Office. Accommodations can be made. You can contact the Disability Services Office in person (A430) or by phone at 972-273-3165. For more information, visit [http://www.northlakecollege.edu/services-and-resources/advice-and-assistance/Pages/disability-services.aspx](http://www.northlakecollege.edu/services-and-resources/advice-and-assistance/Pages/disability-services.aspx)

**Exam 4**
Short Answer/Essay/Study Questions

EXAM 1

What is anatomy? What is physiology? How are they different? Why study them together?

List the major parts and major functions of all of the body systems.

What is homeostasis? Describe it.

What are feedback systems? How do they work?

What is negative feedback? What is positive feedback? How are they involved in homeostasis? Graph each!!

Give mechanical and biological examples of negative and positive feedback systems. Which is more common in the body?

The human body can be sectioned by cutting it from various directions. Name and describe the planes (sections) used in human anatomical studies. At home, practice making sections on a banana! Identify sections by drawing and description.

Name and describe the sections used to describe tubes (such as a blood vessel). Why are they different than those used for an entire organism?

Label the body with the correct anatomical terms. These should be learned as soon as possible. Flip through the book—notice how these terms are used again and again.

What are anatomical landmarks? Complete Exercise 15 in the lab book using your own body and mirrors. How could these landmarks be used in a clinical situation?

What does dorsal, ventral, posterior, anterior, superior, inferior, medial, lateral, cranial, caudal, proximal, distal, superficial and deep mean? Practice using these—be able to identify them from a picture or a description.

Draw and label the quadrants and regions of the trunk. What are the major organs in each? Are there organs that are found in more than one quadrant or region?

Why are region and quadrants used in anatomy and in medicine? Which is used more commonly in each?

List the enclosed cavities—Draw and label the major ones and their subdivisions. What organs are located within these cavities?

List the serous membranes that line the ventral cavities. How many layers do serous membranes contain? Draw and label each.

List the exposed cavities. Draw and label the major ones.

List the mucous membrane than line the exposed cavities. How many layers does a mucous membrane consist of? How are these membranes named?

What are the three embryonic (primary) tissues? Which adult tissue does each become?

What are the four adult tissues. What are the defining characteristics of each

How are epithelial tissues named? How many layers are involved? How are cell shapes named?
What does the name “ciliated pseudostratified columnar epithelium” tell you about this tissue?

Draw each epithelial tissue and describe it. Where are each located? What are their functions?

Compare and contrast exocrine and endocrine glands. Give an example of each.

Discuss the anatomical (structural) classifications of exocrine glands—What are the differences among acinar (alveolar), tubular and tubuloacinarian.

Discuss the secretion (functional) patterns of exocrine glands. How do holocrine, apocrine and merocrine glands secrete their products?

Discuss connective tissues. What is ground substance? What is matrix? Name the fibers present in matrix. Describe each. What are the different cell types found in connective tissues?

In what tissue(s) would you find fibroblasts? osteocytes? chondrocytes? adipocytes? reticulocytes? erythrocytes and leucocytes?

What is mesenchyme? Why is it called an undifferentiated tissue? What can it become?

Name the different categories of connective tissues. What are the characteristics of each? Draw and identify each tissue. Where are the different tissues located? What are their functions?

Discuss Muscle. How is it a “specialized tissue”? What is it specialize to do? Where is each type of muscle found? Draw and label each.

What does striated mean? What are intercalated discs? Be able to differentiate these by picture or description. Where is each found? What are their functions?

Discuss nervous tissue.

What are neurons and neuroglia? Draw and label each of these. Where is each found? What are their functions?

Skin:

Describe the integument. Discuss the epidermis, dermis and hypodermis layers. What type(s) of tissue is found in each?

Discuss (draw and label) the five layers of the epidermis of thick skin from the outside in. What are the primary functions of each layer? Which layers are dead cells? Which layer is missing in thin skin?

What is keratin? What are the different types? Why are they important? Besides the epidermis where else is keratin found?

Discuss the cells of the epidermis. What are Keratinocytes? Melanocytes? Merkel cells? Langerhans cells? What are their functions?

Describe the different types of tactile (touch) receptors (including the root hair plexus) located in the skin. How does each differ in structure and function?

How does “hair stand on end”? What purposes does it serve? What is the muscle called that produces this?

Discuss the cross sectional anatomy of a hair. Draw and label the different layers from the outside in or inside out. Know what each layer is made from.
List the 3 things that contribute to skin color. Discuss skin coloration and UV light. Why do peoples of the Earth vary so much in skin tone? What do rickets, vitamin D, and cancer have to do with skin color?

Discuss the 3 degrees of skin burns. What are the “defining” characteristics of each?

**EXAM 2**

**Bones:**

How are bones classified (3 ways)? What are the divisions of the skeleton? What are the shape classifications for bone? What type bones belong to the so-called “special” shape classification? Be able to classify each bone.

How many named bones in the entire skeleton? Name the bones of the Axial skeleton. How many are there? Name the bones of the Appendicular skeleton. How many are there?

Name the bones of the skull. How many cranial bones are there? How many facial bones are there? What are the ear ossicles? How are each of the skull bones classified?

How many named bones in one hand? In one foot? In one leg (including foot)? In one arm (including hand)? In the skull? In the ribcage? How are each classified?

What two bones comprise the pectoral girdle? How are they classified?

How many pairs of ribs does a man have? a woman? What are vertebrosternal (true) ribs? Vertebrochondral (False) ribs? Vertebral (Floating ribs?)

How many vertebrae are there? How are they classified? What are the divisions of the spinal column? How many vertebrae in each?

Describe each type of vertebra. What is unique to each type? List the differences you would use to decide what type of vertebra one is.

What are the normal curvatures of the spine? Which 2 are primary? Which 2 are developmental (secondary)? Name 3 abnormal curvatures of the spine and give the area in which they are located.

How many vertebrae fuse to form the sacrum? The coccyx?

Describe these bones.

What is the name for the hip bone? Is it the same in a child as in an adult? What is the name for two hip bones joined at the pubic symphysis? What is the name for the 2 hip bones plus the sacrum?

Describe the anatomical features (acetabulum, pubic angle, pelvic inlet (brim), pelvic outlet, etc.) of the pelvis. How do female and male pelvis differ? Describe each. How is a female pelvis more suited to child birth?

**Bone Tissue:**

Compare and contrast the structure of spongy bone and compact bone. Draw and label an osteon with the following: canaliculi, central canal, lamellae, perforating canals, lacunae. What are trabeculae?

Describe what happens when you soak a bone in vinegar? Put it in an oven? Why? What is it about the structure of bone that changes when these things are done?
Describe a long bone. Draw and label one. What is an epiphysis? A diaphysis? A medullary canal? An epiphyseal plate? An epiphyseal line? How does a child's long bone look different than an adult's long bone?

Describe how long bones grow? Compare and contrast intra-membranous ossification and endochondral ossification. Name 3 bones that form in each way

What is interstitial growth? What is appositional growth? Which is responsible for growth in length? In diameter? Remodeling?

Name the different types of bone cells? Draw each. What is the function of each? Where are each found?

What is remodeling? Describe the process. When and why does it take place?

Describe the fetal/infant skull? What are fontanels? What is their function? What would happen if the fontanels closed prematurely? Draw and label the major fontanels.

Define the following terms: trochanter, tubercle, fissure, fossa, foramen, condyle, spine, process, crest, line, notch, tuberosity, groove, canal

Name the carpals in order proximal row first (lateral to medial) distal row second (lateral to medial)—What is the point of “steve left the party….to take cathy home”?

Name the tarsals in order distal row first (medial to lateral) proximal row second (medial to lateral)—What is the point of “my instructor lectures constantly….never to cease”?

Describe the roles of human growth hormone and the sex hormones in the maintaining the homeostasis and growth of the skeleton.

What effect does castration (removal of the gonads) before puberty have on adult height? Why is this true? Describe the growth pattern of a castrated individual compared to an intact individual.

What are the normal blood levels of calcium ions? Where is most calcium of the body found/stored? Discuss the regulation of blood calcium by PTH and Calcitonin. What is the effect of these hormones on bone cells and bone mass?

What are the targets of PTH and Calcitonin? How do they affect each?

Joints:

Name the 3 anatomical classifications of joints. What is this classification based on? Give an example of each.

Name the 3 physiological classifications of joints. What is this classification based on? Give an example of each.

Name the six types of diarthroses/synovial joints and give an example of each. Describe them. What are the bone shapes found at each of these joints?

How are ligaments named? What is an extracapsular ligament? An intracapsular ligament? Give examples of each.

Draw and label diagrams of the hip, elbow, knee and shoulder. Make sure you include the synovial cavity, joint capsule, synovial membrane, synovial fluid, ligaments, bursae, tendon sheaths.
Draw and describe the following movements: abduction, adduction, elevation, depression, flexion, extension, hyperextension, opposition, rotation, circumduction, lateral flexion, supination, pronation, eversion, inversion, plantar flexion, dorsal flexion, medial rotation.

What is osteoporosis? Osteomalacia? Pagett’s disease? Rickets?

EXAM 3

Describe the organization of the nervous system. What is the CNS? What is the PNS? What does SA, SE, VA, VE (ANS) mean? What are the two divisions of the VE (ANS)?

What are the 3 functions of the nervous system? Describe each?

What are the 3 structural types of neurons? Draw and describe each. Label the different parts. What is the function of each?

What are the 3 functional types of neurons? Draw and describe each. What is the function of each?

What are the six types of neuroglia? What is the function of each? Where do you find each?

What is myelin? Why is it important? Which cells produce myelin in the CNS? In the PNS?

Discuss the structure of the neuron cell membrane. What are the functions of the proteins in the membrane?

Describe channels. What are the different types? How do leak channels differ from gated channels? What are the different types of gated channels? What causes each to open?

Describe the sodium/potassium/ATPase pump. What does it do? In what ratio? Why is this important?

Discuss the ions sodium and potassium and their importance in the nervous system.

What is the trans-membrane potential? How is it measured? Calculated? How are sodium and potassium involved?

Discuss resting potential? How is it produced? Maintained? What is the average voltage across the membrane on neurons? Describe the characteristics of the neuron cell membrane (pumps, channels, etc.) and its environment (ion concentrations) that contribute to the resting potential.

What is a stimulus? Name the two types of stimuli. Which ion is associated with each?

Discuss graded potentials. How long do they last? How far do they travel?

Define Depolarization? Repolarization? Return to Resting Potential? How are these related to stimuli?

Discuss action potentials. How long do they last? How far do they travel? What happens at Threshold Potential? Which gates open? Which ion moves?

Draw and label the graph of an action potential (AP), including all appropriate ion movements, opening and closing of channels, etc.

List the characteristics of an AP vs a graded potential. Compare and contrast an AP with a graded potential. List all the differences!!
Discuss continuous conduction and saltatory conduction. What are neurofibral nodes (Nodes of Ranvier)? Why are they important?

Discuss the steps in synaptic transmission. What is a neurotransmitter? What ion is important for vesicle migration and neurotransmitter release?

What is ACH? What is ACHe (acetylcholinesterase)? Why is having ACHe just as important as having ACH?

Sarin (gas) is a toxin which inhibits ACHe. Tetrodotoxin (from the puffer fish) is a toxin that prevents voltage gated sodium channels from opening. Atropine (from deadly nightshade plant) prevents chemical gated channels from opening,

The above are poisons. What effect would each of these have on the function of neurons? Describe what happens when you ingest each of these. How do each “kill” you?

What is an EPSP? an IPSP? an End Plate Potential? Which channels and which ions are involved in each? Do they result in a depolarization or hyperpolarization? Why are they graded potentials?

Discuss temporal and spatial summation. How many neurons are involved with each? How and when do they fire? What is each “used” for?

How does presynaptic facilitation and presynaptic inhibition work? How is calcium involved? What effects do they produce? Describe a situation where each is seen.

Muscle:

What are the 4 properties that all muscles share?

Compare and contrast the 3 types of muscle. Draw a picture of each.

What are the connective tissue coverings of skeletal muscle. What tissue comprises each? What does each surround?

What are myofibrils? What is the sarcoplasmic reticulum? What ion does the SR contain?

Draw and label a sarcomere. Include all bands, zones, lines, thick filaments and thin filaments.

What proteins make up the thin filament? What binding sites does each contain?

What proteins make up the thick filament? What binding sites does each contain? What is important about the “neck or hinge” region?

List the steps in a muscle contraction. Start with the AP on a SE neuron. Do not forget synaptic transmission and the AP on the muscle cell. Please be as detailed as you can be. List what each protein does and how the myofilaments interact with each other. Why is this called the “sliding filament mechanism”?

Where does the muscle cell get the energy to contract? Which protein is involved. What happens when the cell begins to run out of energy? What is fatigue?

Draw and label the graph of a muscle twitch? What is going on during the latent period? the contraction period? the relaxation period?

Draw a graph of wave summation? Incomplete tetanus? Complete tetanus?
What is a spasm (cramp)? Why do think a fatigued muscle is more apt to become spastic than a fresh muscle? Explain how/why rigor mortis develops. Why does a body get “stiff” after death?

Discuss isometric and isotonic contractions. Within isotonic, differentiate between concentric and eccentric contractions.

What are the different types of skeletal muscle fibers? How do they differ in relation to speed, color, myoglobin content, ATP production? What muscles would you expect to have a high proportion of each?

Describe cardiac muscle cells and smooth muscle cells. How are they different from skeletal muscle cells?

What protein is found in cardiac and skeletal muscle but is absent in smooth muscle. What is it replaced with?

What are the two properties that cardiac muscle exhibits that skeletal muscle does not? How and why do they occur?

What is an intercalated disc? What is its function?

Identify the anatomical parts corresponding to the generic components of a lever system. Describe the arrangement of these parts in first, second, and third class lever systems.

List the ways in which muscles are named? Give examples.

What is an origin, an insertion and an action? What is a prime mover? a stabilizer? a synergist? an antagonist? Give examples of each.

Identify the anatomical parts corresponding to the generic components of a lever system. Describe the arrangement of these parts in first, second, and third class lever systems. Draw each.

How are skeletal muscles named? Give examples of each.

Be able to name skeletal muscles.

EXAM 4

What is the “basic pattern” seen in the brain and spinal cord? What is the difference between white matter and gray matter?

Describe the development of the CNS?

What are the hollow spaces inside the brain and spinal cord? Draw and label the ventricles. Describe the origin and circulation of Cerebrospinal Fluid. How much is produced per day?

Describe the protective coverings of the brain and spinal cord. How are the dura, arachnoid and pia different? What is CSF? How does it protect and aid brain function?

List the parts of the telecephalon, diencephalon, mesencephalon, metencephalon, and myelencephalon.

What are the major fissures and sulci of the cerebral cortex? What are the major gyri? Name the lobes of the Cerebral Cortex. What sulcus separates each?

What is a sensory and/or motor homunculus (little man)?

What is the function of association areas? Why do you think that they are bigger than the sensory area they are associated with?

What are the 3 types of white matter in the cerebrum? What do they each connect? Describe what a person would be like if the corpus callosum were severed.

What are the functions of the Thalamus?

What are the functions of the hypothalamus? Why is it sometimes called the “link” between the nervous and endocrine systems? What 2 hormones are produced by the hypothalamus? What are releasing and inhibiting factors used for?

What area mediates visual reflexes? Auditory reflexes? What are the cerebral peduncles?

What vital centers are found in the pons? In the medulla?

There are 12 pairs of cranial nerves. List the name, origin, route through the skull, organ innervated, function and whether they are sensory/motor/both of each. Which cranial nerves carry autonomic nervous system fibers?

Discuss how the right cerebral cortex is different from the left cerebral cortex. What does it mean to be “right-brain dominant”? “left brain dominant”?

What is the function of the prefrontal cortex? What would happen to a person if damage were to occur to this area?

What is a stroke (a CVA)? How does it affect the brain and brain function?

Where are most peoples speech centers located? Discuss the differences in symptoms with damage to Broca’s and damage to Wernicke’s.

If you were to ask a “right-brain dominant” person and a “left-brain dominant” person for directions, how might their answers differ?

Discuss the cerebellum. Name the lobes. What are folia? Arbor vitae? Vermis? What are the primary functions of the cerebellum?

Draw and label the cross-section of the spinal cord. Include horns, tracts, spinal nerves (with roots) and a somatic afferent fiber, association fiber, and a somatic efferent fiber.

Draw a cross-section of the spinal cord and label the ascending tracts and the descending tracts.

How many fibers are involved in the sensory tracts? What are they named? How many fibers are involved in the motor tracts? What are they named?

What is flaccid paralysis? Spastic paralysis? Hemiparalysis, Paraparalysis, Quadraparalysis? Describe how each occurs and what the symptoms of the patient might be.

Discuss reflexes? What is the difference between spinal and cranial? Innate and acquired? Somatic and visceral?

List the components of a typical reflex. How many neurons are involved?
Using the anatomical names of the ANS (i.e. craniosacral and thoracolumber) compare and contrast the anatomical arrangements of the sympathetic and parasympathetic nervous systems. List the ganglia associated with each.

Using the physiological names of the ANS (i.e. Fight or Flight and Rest and Digest) describe the functions of the sympathetic and parasympathetic nervous systems.

Compare the sympathetic and parasympathetic as to: length of preganglionic and postganglionic fibers, neurotransmitters released, types of receptors.

What do dual innervation and single innervation mean? Give examples of places where single innervation occur.

Describe the effects of the sympathetic and parasympathetic nervous systems on the: heart, pupil of the eye, ciliary muscle of the eye, salivary glands, bronchioles in the lungs, digestive system.

What does “cooperative effects” mean? Give examples.
