Instructor Information
Instructor Information will be available on the first day of class.
Name: TBA
DCCCD Email: TBA
Office Phone: TBA
Office Location: TBA
Office Hours: TBA
Division Office and Phone: STEM Division, M217, 972-860-5211

Course Information
Course Title: Contemporary Mathematics I
Course Number: MATH 1332
Section Number: TBA
Semester/Year: Spring 2020
Credit Hours: 3
Class Meeting Time/Location: TBA
Certification Date: Monday, February 3, 2020
Last Day to Withdraw: Thursday, April 16, 2020
Course Prerequisites

This is an entry-level course and is open to any student meeting TSI standards of college readiness (student must have appropriate assessment test score or have successfully completed DMAT 0 3 1 0).

Course Description

Topics may include introductory treatments of sets, logic, number systems, number theory, relations, functions, probability and statistics. Appropriate applications are included.

Required Course Materials

ALEKS 360 Access Code

All work for the course is completed in ALEKS. The ALEKS 360 Access Code will provide access to ALEKS, which includes an electronic copy of the text, video instruction, and many other helpful features.

ISBN: 9781260389708

Temporary Access to ALEKS

ALEKS provides students temporary access to ALEKS for a two-week period. Once the temporary access expires, students will be locked out of their ALEKS account until a regular Student Access Code is purchased. It is highly recommended that students purchase the regular Student Access Code before the two weeks expire to prevent interruptions in their ALEKS account. The availability of temporary access will depend on its ethical use by instructors and students, and may be discontinued at the discretion of ALEKS at any time. Students completing the entire course using temporary access will receive a grade of F regardless of course performance. An ALEKS 360 Access Code must be purchased in order for students to receive a grade based on course performance.

Note: A student of this institution is not under any obligation to purchase a textbook from a university-affiliated bookstore. The same textbook may also be available from an independent retailer, including an online retailer.

Technology Requirements

Students must have an active e-mail account and regular access to a computer, other than a Chromebook, with a reliable internet connection and an integrated or USB connected Webcam. Students with a Chromebook will need to make arrangements to take Comprehensive Knowledge Checks on campus in the Math Resource Center or
Collaborative Learning Center during their hours of operation, or use another computer with a reliable internet connection and a webcam.

Optional Course Materials

Calculator
Graphing calculators (TI-83/84) are recommended in MATH 13 32. You will have free access to a graphing calculator in ALEKS on selected questions.

Textbook
An eText is included with the ALEKS 3 60 Access Code. Students also have the option of purchasing a loose leaf copy of the text through the Menu in ALEKS. Students wishing to purchase a hard copy of the text should refer to the following information:

Author: David Sobecki
Title: Math in Our World
Edition: 4th Ed.
Publication Year: 2019
Publisher: McGraw-Hill
ISBN: 9781259969690

Course Outline
The course begins with an Initial Knowledge Check (IKC). ALEKS uses this information to give you credit for topics you already know, and determine what you are most “Ready-to-Learn”.

Once you have completed your Initial Knowledge Check, ALEKS will present you with your ALEKS Pie. The number in the center of your Pie is the number of topics in the course for which you received credit on the IKC.

The course consists of 370 Topics:
- Problem Solving (77 topics)
- Sets and Logic (33 topics)
- Number Theory and the Real Number System (26 topics)
- Algebraic Equations and Inequalities (82 topics)
- Graphs, Functions, and Systems (62 topics)
- Consumer Math (34 topics)
- Measurement and Geometry (4 topics)
- Counting and Probability (32 topics)
- Statistics (20 topics)
Each week you will work toward one of the five Progress Goals in the course, learning topics in order to add them to your Pie.

As you progress through the course, you will encounter a Progress Knowledge Check each time you have worked in ALEKS for 5 hours and learned 20 topics. Progress Knowledge Checks are used to confirm understanding of recently learned material. While Progress Knowledge Checks are not used to calculate your grade in the course, your performance can impact the number of topics in your Pie.

**Graded Work**

The tables below provide a summary of the graded work in this course and an explanation of how your final course grade will be calculated. The student enrolled in the course must be the person completing course work.

Students should expect to spend a minimum of 6 hours each week working in the course outside of class time.

**Summary of Graded Work**

Description of Graded Work

Weekly Topics
Students are required to learn a minimum of 10 new topics each week. Each week begins at 12am on Monday and ends at 11:59pm the following Sunday. On Sunday night at 11:59pm, you will receive a grade based on the number of new topics learned that week out of 10. For example, if you learned 7 new topics in Week 2, your grade for that week would be 7/10=70%.

It is important to note that learning 10 new topics each week is a minimum pace and in most cases will not be sufficient for successful completion of the course.

Progress Goals
Every three weeks there is a Progress Goal in the course, at which time you are expected to have a specific number of topics in your Pie. Your grade for each Progress Goal is based on the number of topics in your Pie out of the number of topics due. For example, the first Progress Goal is to have a total of 101 topics. If you had 80 topics in your Pie at the due date, your grade for the first Progress Goal would be 80/101=79%. Students who exceed the number of topics due for a Progress Goal will earn a 100%. Please see the Course Calendar for more information.

Comprehensive Knowledge Checks
A Comprehensive Knowledge Check (CKC) is designed to assess your retention of topics learned in the course. This assessment will begin with your most recently learned topics, then branch out to determine the number of topics you have mastered in the entire course. You will be asked no more than 30 questions and you may use your notes. There is no time limit on a CKC, but CKCs must be completed by their due date.

Comprehensive Knowledge Checks are taken in ALEKS. Students must download the ALEKS Lockdown Browser and have a government or school-issued photo ID and a webcam. Students without a clear photo ID or not visible in the webcam during the entirety of the assessment will receive a score of zero. Extensions will not be granted for technical difficulties.

Comprehensive Knowledge Checks may be taken on campus in the Math Resource Center or Collaborative Learning Center during their hours of operation if you do not have access to a computer with the necessary Technology Requirements.

All Comprehensive Knowledge Checks should be completed without outside assistance – this includes apps, websites, or other people. Students committing/guilty of academic dishonesty – having others complete course work or using apps, online sites, or help from others – will receive a failing grade in the course.

The instructor reserves the right to require on-site testing at any time during the course.
ALEKS Lockdown Browser Information
Please download the ALEKS Lockdown Browser (LDB) prior to beginning a CKC. After downloading the LDB, please check the LDB and your webcam. For technical issues, consult these Troubleshooting Tips or contact ALEKS Customer Support.

CKC Grading Information

**Attendance and Your Final Grade**

Attendance is required and can affect your grade in this course.

- Only your instructor can excuse an absence.
- Students are allowed two unexcused absences.
- Students more than 15 minutes late or leaving more than 15 minutes early will be counted absent.
- Excessive absences will impact the maximum grade possible in the course, regardless of performance.

<table>

</tr>
</tbody>
</table>

**Late Work Policy**

All students are expected to adhere to course deadlines and due dates; late work is not accepted.

**Certification Policy**

Students must attend and participate in their on-campus or online course(s) in order to receive federal financial aid. Instructors are required by law to validate attendance in order for students to receive financial aid.

To be certified as attending on campus mathematics courses, students must attend class AND do one of the following prior to the Certification Date: a) complete the Initial Knowledge Check in ALEKS; or b) complete the Instructor Assigned Knowledge Check upon transferring previous work. Students should contact the instructor with any
questions regarding what constitutes the Initial Knowledge Check or Instructor Assigned Knowledge Check.

Failure to show proof of attendance in the course prior to the Certification Date can affect Financial Aid.

**Withdrawal Policy**

Please consult your instructor before withdrawing from this course, visit the [Dropping or Withdrawing From Classes](#) webpage.

**Instructor Policies**

If a student experiences a situation during the course which prevents the student from working or negatively affects the student's performance, it is the responsibility of the student to contact the instructor immediately for guidance. Notifying the instructor of such a situation at the end of the semester is not sufficient and will not result in an extension.

**Institutional Policies**

Institutional Policies relating to this course can be accessed using the link below. These policies include information about tutoring, Disabilities Services, class drop and repeat options, Title IX, and more.

[Cedar Valley Institutional Policies](#)

**Student Learning Outcomes**

**Texas Higher Education Coordinating Board (THECB) Student Learning Outcomes**

Upon successful completion of this course, students will:
1. Apply the language and notation of sets.
2. Determine the validity of an argument or statement and provide mathematical evidence.
4. Demonstrate fundamental probability/counting techniques and apply those techniques to solve problems.
5. Interpret and analyze various representations of data.
6. Demonstrate the ability to choose and analyze mathematical models to solve problems from real-world settings, including, but not limited to, personal finance, health literacy, and civic engagement.

Cedar Valley Student Learning Outcomes
1. Apply set theory and represent set operations with Venn Diagrams. (THECB #1)
2. Determine the validity of an argument. (THECB #2)
3. Use linear equations and their graphs to solve problems. (THECB #6)
4. Solve basic problems with percents and simple interest. (THECB #3&6)
5. Use fundamental probability/counting techniques to solve problems. (THECB #4&6)
6. Interpret and analyze various representations of data. (THECB #5)
Texas Core Objectives

The College defines essential knowledge and skills that students need to develop during their college experience. These general education competencies parallel the Texas Core Objectives for Student Learning. In this course, the activities you engage in will give you the opportunity to practice two or more of the following core competencies:

1. **Critical Thinking Skills** - to include creative thinking, innovation, inquiry, and analysis, evaluation and synthesis of information
2. **Communication Skills** - to include effective development, interpretation, and expression of ideas through written, oral, and visual communication
3. **Empirical and Quantitative Skills** - to include the manipulation and analysis of numerical data or observable facts resulting in informed conclusions
4. **Teamwork** - to include the ability to consider different points of view and to work effectively with others to support a shared purpose or goal
5. **Personal Responsibility** - to include the ability to connect choices, actions, and consequences to ethical decision-making
6. **Social Responsibility** - to include intercultural competence, knowledge of civic responsibility, and the ability to engage effectively in regional, national, and global communities

MATH 1332 develops Critical Thinking, Communication, and Empirical and Quantitative Skills by requiring students to solve and analyze applications to at least one of the following: sets, logic, number systems, number theory, functions, probability and statistics.
